*1 Refer to Input voltage derating.

*2 When the input voltage is more than 255V, the power factor corrector function stops, and the output voltage becomes rectified AC input voltage.

*3 The value included the output setting and the line regulation, the load regulation and the temperature regulation.

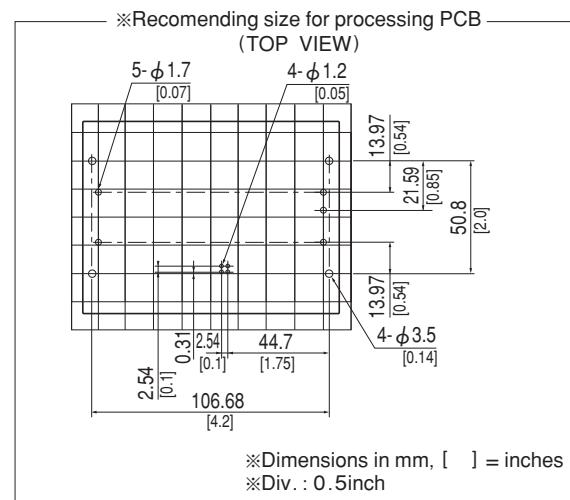

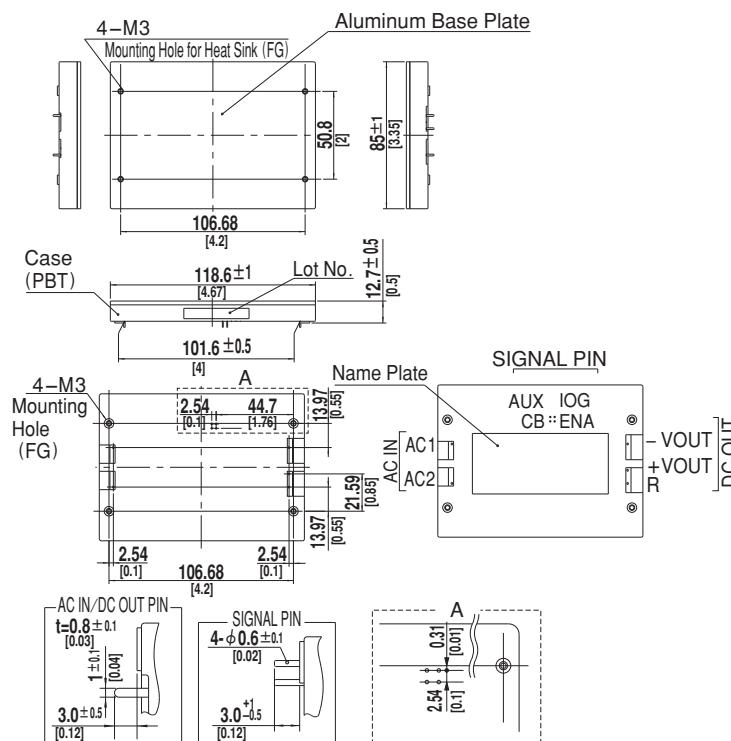

However, the input voltage is in the power factor correction range.

*4 Please consult us in regard to use from -40°C.

*5 Please contact us about class C.

* External components are required. Refer to standard connection method.
